Experience

Inspire By Why, Spain(Remote)   Contract Basis
Individual Developer   Mar 2022 - May 2022

Built a photographer portfolio site using Next.js, empowering the owner to post captivating blogs and share stunning image galleries. Users can engage by leaving comments, sharing content, and expressing appreciation for blog posts. Live Site

Tailwind, Next.js, Redux, Firebase, Node.js, Express, Mongoose, Node Mailer.

- Crafted a professional dashboard empowering admins to publish fully customizable blog posts, showcase their work, and track engagement metrics for effective decision-making.
- Successfully met 100% of the client's user-friendly and responsive design requirements
- Designed and developed a dynamic grid gallery layout system that generates visually appealing grids each time the user clicks a button, enhancing user experience and showcasing content seamlessly.

Projects

Routine Manager - A class routine finder site. Live Site Client Code Backend Code

Developed a comprehensive Class Routine Management System, enabling users to create and manage their schedules effortlessly. The system offers both offline accessibility with downloadable PDF routines and an online platform facilitating communication within dedicated groups for students and teachers.

Tailwind, React, Redux, NodeJS, Socket.io, Mongoose, Express, Firebase.

- Developed a data fetching system for local storage, ensuring accurate data types and automatic data type correction for any incorrectly formatted data that ensure data integrity and smooth functionality.
- Enable systematic search, real-time chat, stepper-based routine creation stepper, and system to download created routine.
- Developed an admin dashboard with an overview page, offering insights into the last 10 days of user activities for effective monitoring and data-driven decision-making.

Service AtoZ - A service finder website. Live Site Client Code Backend Code

Developed a multifunctional website enabling users to share various types of services. The platform caters to four user roles: unregistered users, customers, service providers, and administrators. Service providers can offer services, customers can avail of them, and after admin approval, service providers can provide their services and get paid.

Material UI, React, Redux, Socket.io, NodeJS, MongoDB, Express, Firebase.

- Created an advanced auto-answer system for user queries, and a system to enhance its capabilities by adding more question-answer pairs in the dashboard.
- Added real-time chat feature allowing users to engage without the need for login credentials, along with an auto-user generation system for seamless interactions and user convenience
- Successfully developed an efficient admin dashboard that showcases a 30-day activity overview for providers and orders, including real-time updates on earning status, empowering effective management and insights.

Education

Diploma in Computer Technology
Expected Graduation Date:- December 2023.

Courses

Complete Web Development with Jhankar Mahbub, **Programming Hero** (2022)

- Achieved Black Belt Developer Title.
- Ranked top 5% among the students.
- Received recommendation letter

Think in Redux Way, **Learn with Sumit** (2023)

- Excellent certificate for being in the top 11.
- Ranked in the top 7.
- Received recommendation letter

Skills

Frontend:-

- HTML
- CSS Matarial UI Tailwind
- Javascript ES6
- React Next js
- Redux Firebase Auth

Backend:-

- Node js
- Express
- MongoDb mongoose
- socket.io jwt

Familiar with:-

- Framer motion
- Typescript

Tools:-

- Vs Code
- Chrome Dev Tool
- Git
- Figma Trellow

Achievements

- 1st in P.hero's Project Showcase Contest.
- 1st in Digital Innovation Fair on District.
- 3rd in Lemon Hive's Top Coder Challenge.

Language

English (Conversational)
Bangla (Native)
Hindi (Fluent)
